## EED 1005 Introduction to Programming

## Laboratory#6

---

Student Name : Yavuz BALI

Number:2014502021

---

### Preliminary Work:

#### Task 1:

The **void** keyword in C language tells that the function will not return a value.

- The **program execution stack** statement is the mechanism for returning a value from the called function to its caller.

- fill the blanks with appropriate words and correct if there are any errors.

```
#include int addNumbers( int , int); //function prototype
```

```
main()
```

```
{
```

```
printf("Nothing happening in the main function.");
```

```
}
```

```
//function definition
```

```
int addNumbers(int var1, int var2)
```

```
{
```

```
return var1 + var2;
```

```
}
```
